

CERTIFICATE OF COMPLETION

To whom it may concern,

This is to certify that Husain Ghadiali has successfully completed an analysis of myAgro client harvest and sales behavior from November 4, 2022 to December 8, 2022. The deliverables of this project were:

1. A Jupyter Notebook (Python) with:
 - a. Data preparation of four myAgro sales and agricultural datasets
 - b. Comprehensive exploratory data analysis (EDA)
 - c. Questions formulated about the potential relationship between myAgro client sales behavior, agronomic practices, and harvest outcomes
 - d. Innovative methods and visualizations to answer these questions
 - e. Recommendations of action for myAgro
2. A twelve-minute presentation and Q&A session

For participants to be successful, they were required to demonstrate an understanding of myAgro business logic and some necessary agricultural information. They had to convey a clear storyline and from the EDA to the solutions within their notebooks and presentations. The success of this project required mastery and knowledge of best practices in statistical and data analysis, Python coding, and interpreting results for business intelligence. The success of this project also relied on the participant's capacity to work collaboratively within a team with little supervision.

For the reasons above, Husain has demonstrated he is qualified to create quality data products of business value. We are confident that he will be a beneficial addition to your organization and will succeed in any of the tasks he is assigned.

Sincerely,

Vanessa Scalora
